

Useful tips for renovating old buildings

A practical aid for renovating old buildings

The renovation guide from Münsterland e.V. is here: on 70 pages, readers can find out everything they need to know about the steps involved in renovating old buildings. The guide [can be downloaded here](#).

DOWNLOAD GUIDE >

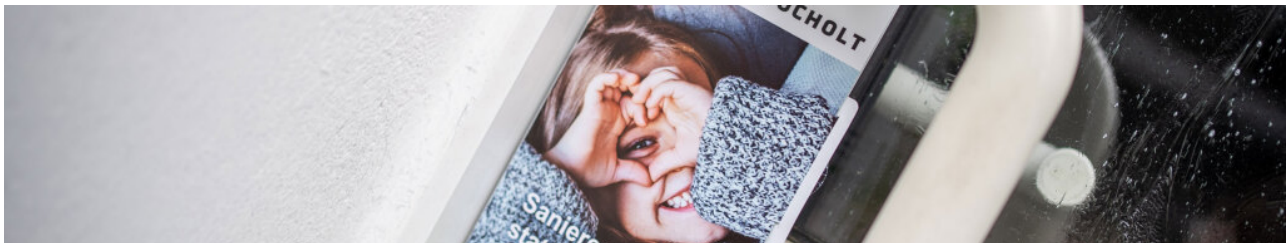

Targeted assistance as a video

The practice-oriented videos of the [NEI Detmold](#) offer targeted and practical assistance for self-providers and renovation workers, motivated homeowners and quality-conscious people. They are separated by topic, so they can be viewed in a very targeted way. This saves time and provides a clear view.

An overview through the jungle of the currently valid subsidies is also part of each video. All content is explained in an easy-to-understand manner and even questions of building physics, which always play an important role in thermal insulation measures, are no longer a mystery. Simply click on the desired topics.

Note: The videos are uploaded to the YouTube video platform. When you call up the videos, data may be transmitted to third parties.
